Figure

Euro effective exchange rate, real and nominal ........................................... 16
Pace of unemployment reduction ................................................................. 17
Index of market discipline for member states .............................................. 20
Euro area current account surplus ............................................................... 22
EA vs USA vs UK ......................................................................................... 24
Largest euro area countries .......................................................................... 25
Cash held by Non Financials Firms. ............................................................. 26
British pound exchange rate ........................................................................ 33
Interest rate spreads in the euro area ......................................................... 34
Aggregate Fiscal Stance and the stability and growth pact ....................... 37
Growth in outstanding loans in the euro area ............................................. 41
Productive investment for the private sector in the euro area .................. 42
Export market shares .................................................................................... 43
Unemployment rate ...................................................................................... 44
Inflation in the euro area ............................................................................... 46
Expected Inflation in the euro area .............................................................. 46
Change in the unit labour costs of euro area countries ............................ 47
Investment to GDP ratio .............................................................................. 51
Unemployment rate in the EU and the Eurozone ....................................... 58
Long term unemployment rates ................................................................. 59
Number of years to reach 2007 rate of unemployment at current speed of reduction . 60
Underemployment and unemployment in the euro area ........................... 61
Youth unemployment ratio in the EU and the Eurozone ......................... 62
Youth unemployment rates ......................................................................... 63
Correlation between the NEET-rate and the unemployment rate in 2015 .... 64
Evolution between 2008 and 2015 of share of national equivalised income . 67
Income inequality in the EU, the Eurozone and the US .............................. 68
Regional convergence in the EU 2005-2008 ............................................ 70
Regional convergence in the EU 2008-2014 ............................................. 70
Anchored risk-of-poverty rate ...................................................................... 71
Change in the anchored risk-of-poverty rate from 2008 to 2015 .............. 72
Correlation between change in the anchored risk of poverty and change in unemployment from 2008-2015 ......................................................... 73
Evolution of risk of poverty and social exclusion in the EU-27 ..................... 74
Correlation between the poverty rate and total expenditures on social benefits as a percentage of GDP ................................................................. 75
Change in severe material deprivation rate 2008-2015 ........................................ 76
Evolution of severe material deprivation ............................................................. 77
Well-being oriented economic policy making based on the Magic Polygon ............ 85
Evolution of headline sustainable development indicators, 2000-2015 ................. 87
Evolution of headline sustainable development indicators, 2000-2015 ................. 87
Evolution of real GDP per capita & risk of poverty or social exclusion, 2008-2014 .... 89
Evolution of greenhouse gas emissions and primary energy consumption, 2008-2014 89
Evolution of real GDP per capita and senior employment, 2008-2014 ................... 90
Total investment rate in the Eurozone and in the United States .......................... 92
Investment in the Eurozone – Asset breakdown .................................................. 93
Investment in the Eurozone – Geographical breakdown ....................................... 93
Monetary policy stance under alternative scenarios ............................................ 95
Investment rate under alternative scenarios ....................................................... 96
Demand and supply factors in the credit market in the euro area ......................... 97
Bubble series and the estimated PCA bubble indicator for each asset class .......... 99
Bubble responses to an expansionary shock to unconventional monetary policies .. 100
General government gross fixed capital formation in selected countries ................. 108
General government net fixed capital formation (ESA 2010) in selected countries ........ 108
Selected macroeconomic indicators for baseline and investment stimulus scenarios for the euro area-12 ................................................................. 122
Current accounts in the euro area ................................................................. 133
Real unit labour costs in the euro area ........................................................... 137
Nominal unit labour costs in the euro area ....................................................... 138
Public debt in 2035, fiscal impulse and output gap ........................................... 146
Baseline – Current account in 2016 and in 2035 ............................................... 147
Symmetric price adjustments – Average inflation and current account improvement. 149
Symmetric price adjustments – Fiscal space and growth .................................... 150
Euro appreciation to 1.2$ – impact on current account ....................................... 152
Euro appreciation to 1.2$ – fiscal space and growth ........................................... 153
Deflation risk – Impact of a lower inflation (-0.1% each year, 2020-2035) on debt and growth ................................................................. 154
Exchange rate risk – Impact of a 2% appreciation of euro on trade balance ............ 156
Relaxing public debt target & public investment – impact on growth .............. 159
Relaxing inflation in high CA surplus countries – impact on trade balance ........ 161
Traditional securitization (“true sale”) of NPLs serviced with another
should be facilitated .................................................. 185
Outstanding amounts of EU securitized products by country in % of the EU total .. 188
Outstanding amounts of securitized products in EU countries as a share of GDP .... 188
Derivative trading volumes and limiting factors for extending industrial production . 201
The stock-flow consistent approach .................................. 202
Model Results ................................................................. 203

Table

Breakdown of short term forecast for euro area ............................................. 15
Total factor productivity growth ................................................................. 18
Growth performance of EU countries ......................................................... 32
EA Aggregate Fiscal Stance (change in structural balance) .......................... 36
Fiscal stance ......................................................................................... 38
Non-performing loans ............................................................................. 49
Public finance and output performances under the baseline scenario ............ 54
Is it possible to reach a 60% debt-to-GDP ratio? ....................................... 55
Gross public debt and ECB holdings of sovereign ...................................... 102
Public financing needs and ECB yearly purchases of public debt securities .... 103
Implied marginal returns to public investment ............................................ 114
Various opportunities to strengthen public investment and facilitate
an expansionary overall fiscal policy stance in Europe ............................... 120
Investment equation for the euro area ....................................................... 126
Identification of financial bubbles .............................................................. 127
Nominal adjustments needed .................................................................... 141
Symmetric price adjustments ..................................................................... 149
Deflation risk – impact on current account in 2035 .................................. 154
Exchange rate risk – impact on current account in 2035 ............................. 156
Using fiscal space in Germany, Austria and Netherlands: +1%-of-GDP
public spending expenditures from 2017 ............................................... 158
Fiscal space and Public investment (2017-2035) – impact on public debt
and assets ..................................................................................... 160
Relaxing inflation in high CA surplus countries – impact on current account in 2035 ................................................................. 161
MIP: the asymmetric nature of the macroeconomic surveillance .................................................. 166
Public finance and output performances under the baseline scenario ........................................... 169
Is it possible to reach a 60% debt-to-GDP ratio? ................................................................. 170
Correction of fiscal and external imbalances in symmetric price adjustment case ................... 170
Correction of fiscal and external imbalances, with appreciation of the euro up to 1.2 171
Main hypotheses for 2016 ................................................................. 171
Non-performing loans to total gross loans ........................................................................ 175
NPLs exposures of EU countries by region (in March 2016) ................................................. 178
NPLs and provisions in the euro area (at end-2015) .............................................................. 179
Non Performing Exposure (NPE) Ratios by Sector ................................................................ 180
Securitization of loans in the euro area by type of agents ......................................................... 189
Distressed asset markets and loan securitization in EU countries ........................................ 190
Modelling a securitization market ................................................................. 208

Box

Gender equality challenged by austerity policies ................................................................. 64
Describing risk scenarios ................................................................. 155
Definition and data on NPLs ................................................................. 176
Qualifying securitizations: the EBA’s criteria and the European Commission
proposal’s for STS securitization ................................................................. 190
Dealing with NPLs by offering a State guarantee to NPLs securitization:
the case of Italy ................................................................. 191

Appendix

Investment equation for the euro area ................................................................. 126
Identification of financial bubbles ................................................................. 127
MIP: the asymmetric nature of the macroeconomic surveillance .................................................. 166
iAGS model hypotheses and simulations ................................................................. 169
Modelling a securitization market ................................................................. 208
